

JOURNAL-01

1. Write a program to take command line input and check number is odd or even.

```
import java.util.Scanner;
class PRG_01
{
      public static void main(String [] args)
      {
            int A;
            //int A=Integer.parseInt(args[0]);
                                                  //command line input.
            Scanner sc = new Scanner(System.in);
            System.out.print("Enter any No.:");
            A = sc.nextInt();
            if(A%2==0)
            System.out.println("The value "+A+" is even.");
            else
            System.out.println("The value "+A+" is odd.");
      }
}
Output:
Enter any No.: 23
The value 23 is odd.
```

2. Write a program to take command line input and sum of 2 number.

```
import java.util.Scanner;
class PRG 02
{
      public static void main(String args[])
      {
             int x, y, sum;
             /* x = Integer.parseInt(args[0]);
             y = Integer.parseInt(args[1]); command line input.*/
             Scanner sc = new Scanner(System.in);
             System.out.print("Enter the first No.:");
             x = sc.nextInt();
             System.out.print("Enter the second No.:");
             y = sc.nextInt();
             sum = sum(x, y);
             System.out.println("The sum of two numbers x and y is: " + sum);
      }
      public static int sum(int a, int b)
      {
             int sum = a + b;
             return sum;
      }
```

```
21BCA152
```

}

Output:

Enter the first No.: 15

Enter the second No.: 12

The sum of two numbers x and y is: 27

3. Write a program to take command line input and calculate a Simple Interest.

```
import java.util.Scanner;
class PRG_03
{
    public static void main (String args[])
    {
        float p, r, n, si;
        /* p= Float.parseFloat(args[0]);
        n= Float.parseFloat(args[1]);
        r= Float.parseFloat(args[2]); command line input.*/
        Scanner s=new Scanner(System.in);
        System.out.print("Enter Value For Principal Amount :");
        p=s.nextFloat();
        System.out.print("Enter Value For Number Of Month :");
        n=s.nextFloat();
```

```
System.out.print("Enter Value For Rate :");

r=s.nextFloat();

si = (p*r*n)/100;

System.out.println("Simple Interest is : " +si);

}
```

Output:

Enter Value For Principal Amount: 5000

Enter Value For Number Of Month: 6

Enter Value For Rate:4

Simple Interest is: 1200.0

4. Write a Program to take command line input and Check Number is Positive or Negative.

```
import java.util.Scanner;
class PRG_04
{
    public static void main(String [] a)
    {
        int b;
        // b= Integer.parseInt(a[0]);      //command line input.
        Scanner sc = new Scanner(System.in);
```

Output:

Enter any No. : 5 5 is Positive.

5. Write a Program to take command line input and Check Year is Leap Year or Not.

```
import java.util.Scanner;
class PRG_05
{
    public static void main(String[] args)
```

```
{
      int year;
      boolean leap = false;
      Scanner s=new Scanner(System.in);
      System.out.print("Enter any year : ");
      year=s.nextInt();
      //year= Integer.parseInt(args[0]); //command line input.
      if (year \% 4 == 0)
      {
             if (year % 100 == 0)
             {
                   if (year \% 400 == 0)
                          leap = true;
                   else
                          leap = false;
             }
             else
             leap = true;
      }
      else
      leap = false;
      if (leap)
      System.out.println(year + " is a leap year.");
      else
      System.out.println(year + " is not a leap year.");
```

```
21BCA152
```

```
}
```

```
Enter any year: 2015
2015 is not a leap year.
```

6. Write a program to take command line input and find the Character Is Vowel or Not.

```
21BCA152
```

```
}
```

```
Enter any Character :u u is vowel
```

7. Write a program to reverse a given number using while loop.

```
import java.util.Scanner;
class PRG_07
{
    public static void main(String[] args)
    {
        int n , r = 0;
        System.out.print("Enter any No. to reverse : ");
        Scanner sc = new Scanner(System.in);
        n = sc.nextInt();
        while(n != 0)
        {
            int re = n % 10;
            r = r * 10 + re;
            n = n/10;
        }
}
```

```
System.out.println("The reverse of the given number is : " + r);
}
```

Output:

Enter any No. to reverse: 152

The reverse of the given number is: 251

8. Write a program to reverse a given number using for loop.

```
import java.util.Scanner;
class PRG_08
{
    public static void main(String[] args)
    {
        int n,i,r = 0;
        System.out.print("Enter any No. to reverse : ");
        Scanner sc = new Scanner(System.in);
        n = sc.nextInt();
        //n=Integer.parseInt(args[0]); //command line input.
        for(i=1;n!=0;i++)
        {
        int re = n % 10;
        r = r * 10 + re;
        n = n/10;
}
```

```
21BCA152
```

```
System.out.println("The reverse of the given number is : " + r);
}
```

Enter any No. to reverse: 152

The reverse of the given number is: 251

9. Write a program to check number is Armstrong or Not

```
oN /= 10;
}
if(re == n)
    System.out.println(n + " is an Armstrong number.");
else
    System.out.println(n + " is not an Armstrong number.");
}
```

Output:

Enter the No. : 153

153 is an Armstrong number.

10. Write a to check number is Prime number or not.

```
import java.util.Scanner;
public class PRG_10
{
    public static void main(String args[])
    {
        int i,n,m=0,flag=0;
        Scanner sc = new Scanner(System.in);
        System.out.print("Enter any No. : ");
        n = sc.nextInt();
        m=n/2;
```

```
if(n==0||n==1)
                   System.out.println(n+" is not prime number");
            }
            else
            {
                  for(i=2;i<=m;i++)
                   {
                         if(n%i==0)
                         {
                               System.out.println(n+" is not prime number");
                               flag=1;
                               break;
                         }
                   }
                   if(flag==0)
                   {
                         System.out.println(n+" is prime number");
                   }
            }
      }
}
```

Output:

Enter any No.: 17

17 is prime number

11. Write a program to check given string is Palindrome or not

```
import java.util.Scanner;
class PRG_11
{
      public static void main(String[] args)
      {
             Scanner sc=new Scanner(System.in);
             String str, reverseStr = "";
             System.out.print("Enter any string:");
             str = sc.nextLine();
             int strLength = str.length();
             for (int i = (strLength - 1); i >= 0; --i)
             {
                    reverseStr = reverseStr + str.charAt(i);
             }
             if (str.toLowerCase().equals(reverseStr.toLowerCase()))
                    System.out.println(str + " is a Palindrome String.");
             }
             else
             {
                    System.out.println(str + " is not a Palindrome String.");
```

```
21BCA152
```

```
}
```

Enter any string :naman naman is a Palindrome String.

12. Write a program in java to display the pattern like right angle triangle using an asterisk.

```
* *
* * *
* * * *
* * * *

import java.util.Scanner;

class PRG_12
{
    public static void main(String [] args)
    {
        int i,a,b=0;
        Scanner sc=new Scanner(System.in);
        System.out.print("Enter any No.:");
```

Output:

```
Enter any No. : 5
*
* *
* *
* * *
* * * *
```

13. Write a program in java to make such a pattern like a pyramid with numbers increased by 1.

2 3

```
4 5 6
  7 8 9 10
import java.util.Scanner;
class PRG_13
{
      public static void main(String [] args)
      {
            int i,a,b,n=1;
            Scanner sc=new Scanner(System.in);
            System.out.print("Enter any No.:");
            a = sc.nextInt();
            for(b=1;b<=a;b++)
            {
                  for(i=1;i<=a;i++)
                  {
                        if((b+i) \le a)
                        {
                              System.out.print(" ");
                        }
                        else
                        {
                              System.out.print(n+" ");
                              n++;
                        }
```

```
21BCA152
```

```
}
                   System.out.println("\n");
            }
      }
}
```

```
Enter any No. : 4
```

1

2 3

4 5 6

7 8 9 10

14. Write a Java Program to display the pattern using the alphabet.

A B C D E

A B C D

A B C

A B

Α

```
import java.util.Scanner;
class PRG_14
{
      public static void main(String [] args)
      {
            int i,a,b=0;
             char c;
             Scanner sc=new Scanner(System.in);
             System.out.print("Enter any No.:");
             a = sc.nextInt();
            for(b=a;b>=1;b--)
            {
                   c='A';
                   for(i=1;i<=b;i++)
                   {
                         System.out.print(c+" ");
                         C++;
                   }
                   System.out.println("\n");
            }
      }
}
```

Output:

Enter any No.: 5

```
A B C D E
A B C D
A B C
A B
```

15. Write a program to take command line input and print factorial of given number.

```
21BCA152
```

```
for (c = 1; c <= n; c++)
                          f = f*c;
                   System.out.println("Factorial of "+n+" is = "+f);
            }
      }
}
Output:
Enter an integer to calculate its factorial: 5
Factorial of 5 is = 120
16. Write a program to display Fibonacci series
import java.util.Scanner;
public class PRG_16
      public static void main(String[] args)
      {
             int n, a = 0, b = 0, c = 1;
             Scanner s = new Scanner(System.in);
             System.out.print("Enter value of n : ");
             n = s.nextInt();
             System.out.print("Fibonacci Series : ");
             for(int i = 1; i <= n; i++)
                   a = b;
                   b = c;
```

Output:

Enter value of n:5

Fibonacci Series: 0,1,1,2,3.
